

CircularXX Mono Regular

Font Format: OpenType PostScript (OpenType CFF)
Designer: Laurenz Brunner (2013-2019)

A large, bold, black letter 'C' is centered on a solid red rectangular background. The 'C' is rendered in a clean, sans-serif style with a consistent stroke width, characteristic of a monospaced font. The red background is a vibrant, solid color, providing a high-contrast backdrop for the black letter.

Glyph Map

OpenType Layout Features

For details about OpenType Layout Features see the [OpenType Layout tag registry](#).

Substitution Features

2₂²

Access All Alternates

This feature makes all variations of a selected character accessible.

0

Slashed Zero

Some fonts contain both a default form of zero, and an alternative form which uses a diagonal slash through the counter. This feature allows the user to change from the default 0 to a slashed form.

7/8

Fractions

Replaces figures separated by a slash with 'common' (diagonal) fractions.

X₂

Subscript

The "subs" feature may replace a default glyph with a subscript glyph.

H₂

Scientific Inferiors

Replaces lining or oldstyle figures with inferior figures (smaller glyphs which sit lower than the standard baseline, primarily for chemical or mathematical notation). May also replace lowercase characters with alphabetic inferiors.

1st

Ordinals

Replaces default alphabetic glyphs with the corresponding ordinal forms for use after figures.

s.ſ

Historical Forms

Some letterforms were in common use in the past, but appear anachronistic today. The best-known example is the long form of s; others would include the old Fraktur k. Some fonts include the historical forms as alternates, so they can be used for a 'period' effect.

{G}

Case-Sensitive Forms

Shifts various punctuation marks up to a position that works better with all-capital sequences or sets of lining figures; also changes oldstyle figures to lining figures.

Œœ

Localized Forms

This feature enables localized forms of glyphs to be substituted for default forms.

GG

Stylistic Alternates

Many fonts contain alternate glyph designs for a purely esthetic effect; these don't always fit into a clear category like swash or historical. This feature replaces the default forms with the stylistic alternates.

[1]

Stylistic Set 1

Glyphs in stylistic sets may be designed to harmonise visually, interact in particular ways, or otherwise work together.

Glyph Composition / Decomposition

To minimize the number of glyph alternates, it is sometimes desired to decompose a character into two glyphs. Additionally, it may be preferable to compose two characters into a single glyph for better glyph processing. This feature permits such composition/decomposition.

**Justification Alternates**

Improves justification of text by replacing glyphs with alternate forms specifically designed for this purpose (they would have less or more advance width as need may be).

**Alternate Annotation Forms**

Replaces default glyphs with various notational forms (e.g. glyphs placed in open or solid circles, squares, parentheses, diamonds or rounded boxes).

Languages

Information about languages is mainly based on the Unicode Common Locale Data Repository. For details visit the [Unicode CLDR Project](#).
