# OpenType Layout Features

For details about OpenType Layout Features see the [OpenType Layout tag registry](#).

## Substitution Features

**Access All Alternates**  
This feature makes all variations of a selected character accessible.

**Contextual Alternates**  
In specified situations, replaces default glyphs with alternate forms which provide better joining behavior.

**Standard Ligatures**  
Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers the ligatures which the designer/manufacturer judges should be used in normal conditions.

**Discretionary Ligatures**  
Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers those ligatures which may be used for special effect, at the user's preference.

**Tabular Figures**  
Replaces figure glyphs set on proportional widths with corresponding glyphs set on uniform (tabular) widths.

**Numerators**  
Replaces selected figures which precede a slash with numerator figures, and replaces the typographic slash with the fraction slash.

**Denominators**  
Replaces selected figures which follow a slash with denominator figures.

**Fractions**  
Replaces figures separated by a slash with 'common' (diagonal) fractions.

**Superscript**  
Replaces lining or oldstyle figures with superior figures (primarily for footnote indication), and may replace lowercase letters with superior letters (primarily for abbreviated French titles).

**Subscript**  
The "subs" feature may replace a default glyph with a subscript glyph.

**Ordinals**  
Replaces default alphabetic glyphs with the corresponding ordinal forms for use after figures.

**Case-Sensitive Forms**  
Shifts various punctuation marks up to a position that works better with all-capital sequences or sets of lining figures; also changes oldstyle figures to lining figures.

**Localized Forms**  
This feature enables localized forms of glyphs to be substituted for default forms.

**Stylistic Alternates**  
Many fonts contain alternate glyph designs for a purely esthetic effect; these don't always fit into a clear category like swash or historical. This feature replaces the default forms with the stylistic alternates.

**Stylistic Set 1 (Alternate 1)**  
Glyphs in stylistic sets may be designed to harmonise visually, interact in particular ways, or otherwise work together.

**Stylistic Set 2 (Alternate 2)**

**Stylistic Set 3 (Alternate 3)**

**Stylistic Set 4 (Alternate 4)**

**Glyph Composition / Decomposition**  
To minimize the number of glyph alternates, it is sometimes desired to decompose a character into two glyphs. Additionally, it may be preferable to compose two characters into a single glyph for better glyph processing. This feature permits such composition/decomposition.

**Alternate Annotation Forms**  
Replaces default glyphs with various notational forms (e.g. glyphs placed in open or solid circles, squares, parentheses, diamonds or rounded boxes).

**Required Contextual Alternates**

## Positioning Features

**Kerning**  
Adjusts amount of space between glyphs, generally to provide optically consistent spacing between glyphs.

**Mark Positioning**  
Positions mark glyphs with respect to base glyphs.

**Mark to Mark Positioning**  
Positions marks with respect to other marks. Required in various non-Latin scripts like Arabic.

# All Alternates

All alternates are accessible with OpenType layout feature capable applications. If not specified, the feature is registered for all language systems.
