About the Font

Stephan Müller based his stencil font, released as FF Chernobyl in 1998, on four Cyrillic letters he had noticed on a newspaper photograph taken at the Chernobyl power plant during a site inspection in 1991, five years after the disaster. The photographer, Igor Kostin, had become known as the first to document the nuclear accident, returning to the site several times in the following years. In this particular picture, the four letters ЧАЭС were seen stencilled on a basement wall, marking the official name of the power plant.

A rich variety of stencilled type is commonly found in the context of industrial design and commercial communication from the Sovjet era, as it was easily created by hand and inexpensive to produce. Intrigued by the distinctive letter-shapes born out of the atmosphere of Cold War secrecy and apocalyptic catastrophe, Stephan derived a full Latin alphabet in upper and lower case from the minimal Cyrillic sample. In 2020, the Ukrainian type designer Yevgeniy Anfalov, born in Kyiv in 1986, the very year of the

Chernobyl accident, proposed to create a Cyrillic counterpart, thus administering a dialectical homecoming of sorts for the four letters from Chernobyl. Adding to the project, the Latin shapes were entirely redrawn and expanded by Luca Pellegrini at Lineto, with Viktoriya Grabowska adding to the Cyrillic part and contributing some additional refinements in the process.

Both versions now display subtle adjustments such as an extended x-height as well as modified shapes in many letters, most notably G, o, p, q, e and others. Many formal alternates for letters such as X, Y, M, N, K and R pay tribute to a new treatment of the diagonals in the original sample. If the overall appearance is now slightly more playful and light, this might reflect the increased historical distance to the font's sombre origins.

Scripts Latin, Cyrillic
